

MICROBLADING BEFORE TREATMENT

Prior to your semi-permanent cosmetic enhancement think about the look that you wish to achieve. As experts in the field of color analysis and makeovers, we ensure that the correct colors and styles are chosen for you, however you are part of the decision making process.

Permanent cosmetic enhancements normally require multiple application sessions. To achieve the best results, you will be required to return for a touch up treatment six weeks after the initial application.

Be prepared for the color intensity to be significantly sharper and darker immediately after the procedure. This will subside and become softer as the skin heals. This process can take up to fourteen days.

- Since delicate skin or sensitive areas may be swollen or red, you are advised not to make social plans on the day of your enhancement.
- You may wear your normal make-up to your enhancement appointment.
- Do not take aspirin or Ibuprofen 24 hours prior to and after your enhancement. Tylenol is ok.
- Do not discontinue any medication before consulting your doctor.
- Avoid alcohol intake 24 hours prior to your enhancement.
- Do not use Retin A (tretinoin, retinol) skincare products close to the enhancement area 2 days prior to your procedure. You can resume use 2 week after.

Eyebrow Enhancement

- IPL laser hair removal should be performed no less than 2 weeks prior to your enhancement.
- Electrolysis treatments should be performed no less than 5 days prior to your enhancement.
- Eyebrow tinting should not be performed for 2 weeks after your enhancement.

MICROBLADING AFTERCARE

For the next 7-10 days:

- Avoid sweating (the salt in your sweat can undo your microblading)
- Avoid direct sun exposure on your brows
- Keep your brows dry

Keeping your brows dry can be tricky. We suggest washing your face at the sink instead of in the shower. Remove face wash with a wet towel instead of splashing the face with water.

You will also want to apply a very small amount (the size of a grain of rice per brow) of A&D Ointment, Vaseline, or Aquaphor to the brows morning and night for 7-10 days.

No makeup or products of any kind directly on the brows for 7-10 days.

After 10 days you may use a brow pencil, powder, or pomade if you would like.

What to expect (days are different for everyone):

- Immediately after – shape may appear uneven due to swelling. Color will appear reddish due to the inflammation in the skin from the procedure
- Day 1 – 3 eyebrows will appear darker and thicker
- Day 4 – 7 eyebrows will be dry and itchy. Do not scratch, rub or pick at it. They might start to scab/crack or flake off. Eyebrows will look patchy and uneven during healing process. This is absolutely normal. Please **DON'T PANIC**.
- Day 7 – 10 scabs should be all gone (some can take up to 14 days)
- Sometimes eyebrows will appear as if there is no color. The remaining color has absorbed under the layer of skin and in the following week it will resurface as skin cells repair.
- Week 3 – 4 eyebrows will appear true color. Eyebrow might still look patchy or uneven shape. Some rare cases pigment doesn't retain well.
- Week 4 – 6 come back for a touch up. Any small corrections can be made at this visit.

Please Note:

Effects may be different on each individual. Most clients will need two sessions, some will need a third touchup to complete the look at an extra charge.

“EYEBROWS ARE SISTERS, NOT TWINS”
